A dedicated engineering and construction services company that invests in long term relationships with clients and communities, and has been delivering landmark property and infrastructure assets since 1980.
Prokopis Trapezaris founded Trapezaris Construction Ltd in 1980, based on core values of integrity, commitment and hard work. Today, the company’s services span the entire spectrum of the construction industry, firmly based on those same principles; with each valued relationship seen as a long-term opportunity to promote and foster continuity and repeat business.
The management’s insistence on quality of service and responsiveness to client needs remains the company credo and has led to its successful transition from a small-scale building contractor to a diverse business with the capability and resources to undertake projects of any size or scope. The company’s ability to address and manage changing conditions and demands has resulted in growth far beyond its original expectations.

Over the years, Trapezaris Construction has made its mark on the industry, and will continue to do so by embracing emerging technologies and techniques, responding to new market trends, updating and refining processes, and offering an increasingly diverse set of professional services.

To deliver the best we make it our priority to employ the best. The firm’s strength is based upon the collective experience of its people which include talented project managers, engineers, technicians, tradesmen, subcontractors and suppliers all of whom are dedicated to completing your project to the highest standards, on schedule and on budget.
The Trapezaris Construction culture defines who we are, what makes us different, and why we are able to better serve our clients. Our team values the work they do and the results they bring, working enthusiastically towards ensuring every client is totally satisfied. That enthusiasm is evident in all our projects and each team member has a stake in the finished product.

Executive Management Team

The Trapezaris Construction culture defines who we are, what makes us different, and why we are able to better serve our clients. Our team values the work they do and the results they bring, working enthusiastically towards ensuring every client is totally satisfied. That enthusiasm is evident in all our projects and each team member has a stake in the finished product.

Having a unique set of skills and international construction experience, and having worked for large multi-national organisations where tight timelines and budgets are critical, the management has all the ability to master any type of technical and logistical challenge. They have a clear focus on delivering outstanding results for all clients.
Prokopis Trapezaris

Prokopis Trapezaris is the founder of Trapezaris Construction. After completing his higher education, he embarked on his engineering career as a Structural Engineer. Over the years, he worked for high-profile companies in various countries, including Taylor Woodrow (UK), GCC (Saudi Arabia) and Leighton Construction (Australia), before returning to Cyprus in 1992 and establishing Trapezaris Construction Ltd.

Today, Mr Trapezaris is responsible for his company’s development and long term strategic goals and oversees the company’s financial performance. He is a Chartered Engineer and a Member of Engineers Australia.

Andreas Trapezaris

Andreas holds an MEng (Hons) in Civil Engineering from City University, London and has experience in construction management and project engineering, working in both Australia and the UK. He is a Member of Engineers Australia, and of the Institution of Civil Engineers, UK.

His experience has included roles as Project Engineer, Design Engineer and Project Lead Structural Engineer, on various large-scale construction projects in the UK and Australia. Prior to relocating to Cyprus in 2018, Andreas held the post of Construction Manager for the £150 million London Centre Point Grade II listed redevelopment project.

He brings expertise in managing consultants, contractors, project resources and programme scheduling on residential, commercial and industrial projects with capital values of up to £500m.
The construction industry is constantly changing, and so is Trapezaris Construction. Even though business as usual means adhering to the highest of standards, this alone is no longer enough. In an industry filled with vague catch phrases and ideas that are meaningless without actions, we transform these vague concepts into solid ways of doing business.

About Us

The construction industry is constantly changing, and so is Trapezaris Construction. Even though business as usual means adhering to the highest of standards, this alone is no longer enough. In an industry filled with vague catch phrases and ideas that are meaningless without actions, we transform these vague concepts into solid ways of doing business.
Knowing that total client satisfaction gives the best results, we pool our resources to deliver the best experience. We focus on creating a win-win situation, ensuring clear communication with clients and their representatives at every stage. When clients work with us they will experience a different approach that goes further than just simply taking on a job.

They will find that we are highly enthusiastic and proactive during the construction stages. We implement a technically-based approach that adds value to the project: effectively communicating with consultants and clients, reviewing and suggesting alternative techniques and materials, carrying out risk assessments so as to pre-empt problems, and following processes and working methods that guarantee safety and quality of works. Our design management experience and knowledge allow us to collaborate with the client and the design team to formulate strategies and options that will elevate the project and reduce short- and long-term risks.

With a vast inventory of modern plant and machinery and an experienced associated workforce at our disposal, Trapezaris Construction is capable of providing all the resources to undertake complex building and infrastructure projects.
To build on a tradition of trust through dedication, collaboration, customer satisfaction and value creation.

Mission
Values

Teamwork

Our primary asset is our people; and to enable us to grow and be successful, we must provide opportunities and encouragement to help them reach their potential. We also regard our relationships with clients as a form of teamwork—where mutual respect generates its own rewards.

Integrity

Following the highest ethical standards, and always doing the right thing, our business functions on the basis of total integrity.

Commitment

Trusting, lasting relationships are the essence of a great business, so we pay personal attention to every client; focusing on them as individuals, not companies.

Workplace Health & Safety

We have adopted a culture aimed at a zero-accident workplace; providing the safest conditions possible for our employees, subcontractors, clients and others who visits our construction sites. For every project we devise and implement a specific safety programme, and at all times we strive to eliminate incidents by carefully pre-planning construction activities with safety the key consideration.

Inclusion

We foster a positive culture of diversity and inclusion. Employees are encouraged to contribute creative ideas, seek challenges, and grasp opportunities. This in turn enables the company to evolve, and helps to build positive relationships amongst employees, industry partners, and clients.
Values

Innovation

Success is based on the ability to adapt and respond. Innovation and continuous improvement are essential if we are to grow our business. We actively embrace emerging technologies and processes, applying them appropriately to give clients better, more effective outcomes.

Social Responsibility

The way we do business is important to us and we’re proud that we do it professionally, responsibly and ethically. We follow a strategy that reflects our commitment to working together with our staff, our clients and the community around us to ensure that any impact we make is for the better.

Environmental Responsibility

Fully aware of the potential environmental, social, and economic impact that our activities may have on a community, we recognise that it is our responsibility to conduct business in a transparent and ethical manner that places the community and the environment at the forefront of our planning and operations.
Sustainability

To us, sustainability is not just a buzzword. It’s something we practise every day, in so many ways, by implementing new and better approaches to deliver client projects:

- Minimizing waste and maximizing use of time, labour, and materials.
- Perfecting the use of steel-reinforced concrete for general building to deliver safer, stronger, and more efficient buildings.
- Using building techniques that incorporate green methods and materials.
- Reducing greenhouse gas emissions.
- Establishing a set of sustainability standards for each project location.
- Devising a waste management plan that takes into account all environmental considerations.

Every action is planned down to the smallest detail so that collaboration, and an uninterrupted workflow, deliver completed projects to the full satisfaction of the client.
What We Do

We bring our technical knowledge, international experience, and financial strength to deliver construction services to a wide range of building and civil infrastructure projects, undertaking assignments with confidence and clear focus. In addition, we provide invaluable pre-construction consultation services to assist clients in making informed, cost-effective decisions.

In recent years steel-frame buildings have been growing in popularity for both residential and non-residential buildings, because it is both economical and the eco-conscious choice of many architects and designers. At Trapezaris Construction, we are masters of steel-frame building techniques.

Irrespective of the project scale or scope we follow a precise checklist that defines the quality of our work and the eventual outcome. Meticulous attention to detail combined with rigid adherence to project management processes ensures that tasks are undertaken with care and using only the highest specification materials, and that work is completed to agreed budgets and deadlines.
Residential and Commercial Building

From the beginning, we have been building residences, apartments, gated community complexes, retail shops and commercial premises. Much of our work has been for architects and structural engineers who require the services of a skilled contractor, and as contractors to developers who do not have their own workforce. We are also the company of choice for many clients wanting to undertake building maintenance work, renovations, refurbishments & fit-outs and structural repair works to existing properties.
Areas of Building Specialisation

Commercial Buildings
Education Facilities
Government Building Works
Green Building Developments
Healthcare Facilities
Interior Remodelling
Industrial & Manufacturing Facilities
Residential Properties
Hotels & Resorts
Retail Shops
Restaurants
Sports Facilities
Civil and Infrastructure

Going hand-in-hand with our construction capabilities is our civil work. Since 1980 we have been involved in many public and private sector infrastructure projects across the island. We have an excellent track record in successfully undertaking often complex works, and it is a testament to our technical expertise that we are seen as one of the most competent contractors in this field. Clients include Cyprus Public Works Department, municipalities, councils, District Administration Offices and other investors.
Areas of Civil Works Specialisation

Project Management – Design & Build Contracts

Trapezaris Construction undertakes management services for project owners, architects, engineers, and other industry consultants. We provide seamless integration between all stages of the building process—from concept or pre-construction to project completion and handover.

Our consultants provide proactive problem-solving solutions for any construction programme. Increasingly, project stakeholders prefer the simplicity of having one party undertake the design and build. In this case, we manage the entire project based on the scope presented by the owner.

Civil and Infrastructure Works

Trapezaris Construction owns and operates a comprehensive fleet of plant and machinery. This enables us to take on a wide range of civil works.

We have applied our expertise to projects across the island using experienced, skilled and technically proficient personnel to successfully. We have the expertise to successfully undertake an array of work, including bridges, deep excavations, piling work, and ground stabilisation.
Roadworks
A full-service asphalt and roadworks contractor, we are fully conversant with the technical requirements of all types of roadworks from highways to rural byways, together with pavements, hard standings and parking areas.

Sewage and Drainage
Our professional team is able to undertake sewage and drainage projects for government, municipalities and private clients. Works include storm water drainage, sewerage systems, water supply lines and house connections.

Landscaping
Working with architects and designers, we have the ability to meet all soft and hard landscaping construction needs.

Earthworks
Experienced in moving large quantities of soil and sub-surface material, we understand the critical associated geotechnical implications, such as soil fluidity and friction.

Demolition & Removal
We undertake the demolition of all types of structures safely and efficiently, and in full compliance with regulations and environmental considerations. And by using the latest robotic demolition equipment, personnel operate at safe distances. Importantly, we carefully preserve valuable elements for reuse prior to disposal.
Listed Building Redevelopment

We have completed a number of prestigious listed building refurbishments throughout Cyprus and are acknowledged and established leaders in this field. Working to the strict criteria associated with this type of work, we have always exceeded client expectations in terms of quality standards and time constraints.
Areas of Listed Building Specialisation

- Feasibility and engineering judgements
- Facade retention solutions
- Existing structure stabilisation
- Temporary work solutions
Trapezaris Stone

We understand stone in its natural form, and prepare it to take on the shape of inspired design

Experts in Cyprus sandstone, we operate a quarry-to-project service using a dedicated workforce and precision cutting & finishing equipment to meet design-specific needs.

Ours is not a showroom stocked with a limited inventory of pre-fabricated products. Instead, we have our own quarry site at Anogyra to harvest the natural resource itself. By having control over the supply chain—from source to end user—we ensure there are no gaps in our understanding of the possibilities and considerations applicable to specific needs, and can give guidance and support to eliminate the risk of a costly oversight. At Trapezaris Stone, a team of Cyprus sandstone experts is available, with knowledge that extends right to the quarry face.

Our Cyprus sandstone is a natural building stone perfect for walling, stone features and construction. The quality of our product is amongst the best you can find, and so are our skilled stonemasons. When there is a need to create an impression that will last a lifetime, or renovate a valued architectural treasure, Trapezaris Cyprus natural sandstone is the stone of choice.
